US-09-196-196G-44621
i Sequence 44621, Application US/09396196G
i Patent No. 6821724
i GENERAL INFORMATION:
APPLICANT: Mitcheal Mittmann
APPLICANT: David Mack
APPLICANT: David Lockhart
APPLICANT: Affymetrix, Inc.
ITILE OF INVENTION: Methods of Genetic Analysis
FILE REFERENCE: 3101.1
CURRENT APPLICATION NUMBER: US/09/396,196G
CURRENT FILING DATE: 1999-09-15
NUMBER OF SEQ ID NOS: 127806
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 44621

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NESOLI'9 13

US-07-910-222B-6/C

Sequence 6, Application US/07910222B

Patent No. 5397703

PAPLICANT de Boer, Mark

APPLICANT CONTOY, Leah B.

TITLE OF INVENTION: A Method for Generation of Antibodies to
TITLE OF INVENTION: Cell Surface Molecules

NUMBER OF SEQUENCES: 8

CORRESPONDENCE ADDRESS:

ADDRESSEE: Cetus Oncology Corporation
STREET: 1400 53rd Street
CITY: Emeryvile
STATE: CA

COUNTRY: USA

ZIF: 94608

COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBMP Compatible
COMPUTER: BATCHIN Release #1.0, Version #1.25

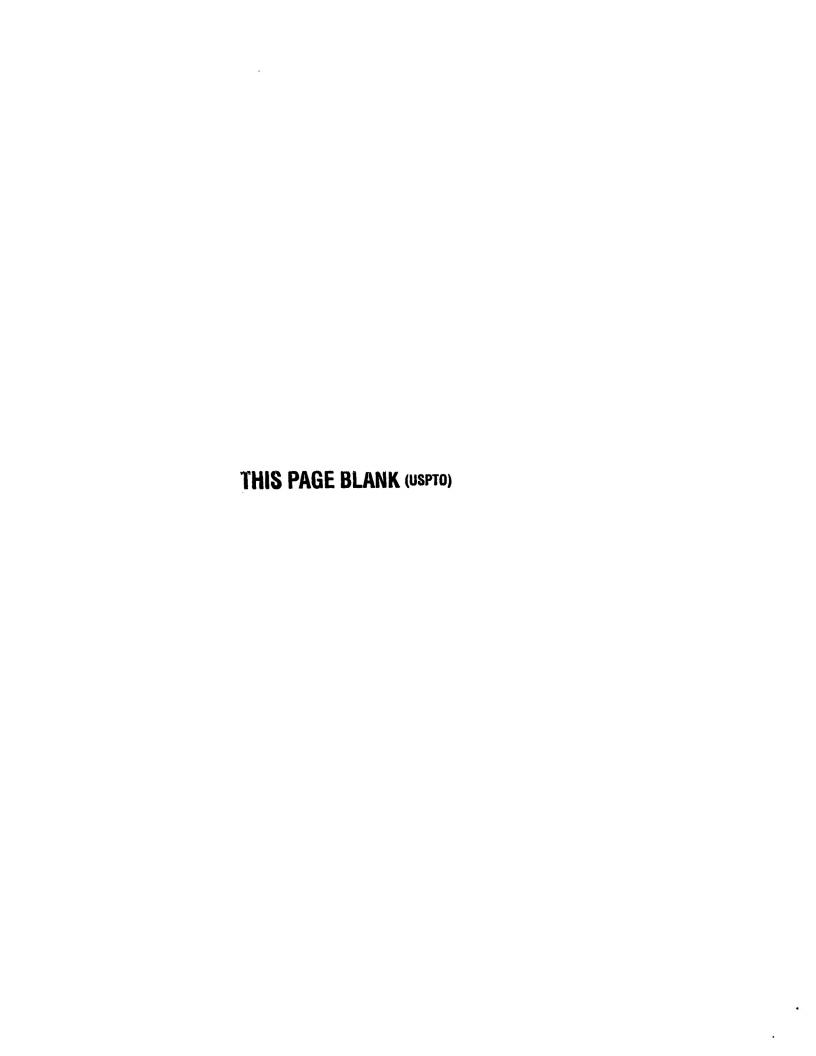

CORPUTER: BATCHIN NUMBER: US/07/910,222B
FILING DATE: 1992079

CHASELFICATION NUMBER: US/07/910,222B

FILING DATE: 1992079

Patent No. US20020142358A1

GENERAL INFORMATION:

APPLICANT: GEMINI SCIENCE, INC.

APPLICANT: LA JOLLA INSTITUTE FOR ALLERGY AND IMMUNOLOGY

TITLE OF INVENTION: HUMAN ANTI-CD40 ANTIBODIES AND METHODS OF MAKING SAME

FILE REFERENCE: 21286/0276339

CURRENT APPLICATION NUMBER: US/09/844,684

CURRENT PILING DATE: 2001-04-27

PRIOR APPLICATION NUMBER: US 60/200,601

PRIOR FILING DATE: 2000-04-28

NUMBER OF SEQ ID NOS: 15

SOFTWARE: PATENTIN OF: 2.1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               US-11-105-172-10/c

US-11-105-172-10/c

Sequence 10, Application US/11105172

Sequence 10, No. US20050244370A1

GENERAL INFORMATION:

APPLICANT: Wajant, Harald

APPLICANT: Wajant, Harald

TITLE OF INVENTION: Selective local activation of members of the TNF

TITLE OF INVENTION: receptor family by systemically inactive
                                                                      Sequence

GENERAL INFORMATION:

APPLICANT: John Palma

TITLE OF INVENTION: Methods of Genetic Analysis of Formalin Fixed Paraffin Embedded S.

TITLE OF INVENTION: Microarrays

FILE REFERENCE: 3684.1

CURRENT APPLICATION NUMBER: US/11/121,849

FORENT FILING DATE: 2005-03

PRIOR FILING DATE: 2004-05-03

PRIOR FILING DATE: 2004-05-03

NUMBER OF SEQ ID NOS: 673904

SOFTWARE: Microarray Probe Sequence Listing Generator V 1.1

SEQ ID NO 141449
